

7 Management Tools in Microsoft Azure

1 Azure Portal

The most common way to deploy and manage azure resources. It's a public website that you can access via a web browser.

2 Azure PowerShell

The most-used command-line tool when managing Azure. It's a module that you add to Windows PowerShell or to PowerShell Core.

3 Azure CLI

A cross-platform command-line program that you use to connect to Azure and to execute administrative commands against Azure resources

4 Azure Cloud Shell

A browser-based scripting environment that's accessible right from your Azure portal allows you to choose the shell experience that suits you best.

5 Azure Mobile App

Allows you to access, manage, and monitor your Azure accounts and resources from an iOS or Android phone or tablet.

6 Azure REST API

REST APIs are service endpoints that support sets of HTTP operations, or methods.

7 Azure Advisor

A free service that's built into Azure that provides recommendations on high availability, security, performance, and cost.
